                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       8
                                                                                                               This invention describes novel antibodies that immunospecifically bind to
                                                                                                                       Blymphocyte Stimulator (BLyS) polypeptides. BLyS is a member of the tumour necrosis factor (TNP) super family and induces B cell proliferation and differentiation. The antibodies of the invention have cytostatic, immunosuppressive, immunostimulant, immunomodulatory, antitheumatic and antiAlDS activity and can be used in vaccines to inhibit the expression and activity of BLyS. The antibodies bind to BLyS and so may be used to detect and quantitate the presence of BLyS in biological samples and may be used in this way to diagnose disease associated with aberrant expression of BLyS. They may also be administered to treat diseases associated with aberrant BLyS expression and activity such as cancer, immune, and autoimmune disorders and
                                                                                                                                                                                                                                                                                             acquired immunodeficiency syndrome (AIDS)). ABP41990-ABP47228 represent the antibodies and fragments of the antibodies described in the method of
                                               Antibodies against B Lymphocyte Stimulating polypeptides, useful for the diagnosis and treatment of cancers and immune disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              GlyGluSerPheSerGlyTyrTyrTrpSerTrpIleArgGlnProProGlyLysGlyLeu 45
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      77

This invention relates to novel antibodies that immunospecifically bind
to B lymphocyte stimulator (BLyS). The BLyS gene has been mapped to
chromosome 1343 and encodes a protein that is a member of the tumour
chromosome 1343 and encodes a protein that is a member of the tumour
necrosis factor superfamily and induces both in vivo and in vitro B cell
proliferation and differentiation. Specifically, it refers to single
chain antibody molecules (scYPs) derived, preferably, from the variable
the neavy CDR3 region that immunospecifically bind to a polypeptide.
Cf fragment thereof, of either human, murine, rat or monkey BLyS. The
fragment invention refers to the use of such antibodies in various methods
for the detection, diagnosis and prognosis of diseases related to the
aberrant expression or inappropriate function of BLyS or its receptor. As
such, these compositions are useful for identifying immune disorders
including mysathenia gravis and multiple sclerosis, inflammatory
disorders e.g. asthma and rheumatoid arthritis, infectious diseases such
as AIDS and proliferative disorders including leukaemia, carcinoma and
lymphoma. Accordingly, they can be described as exhibiting various
activities such as antirheumatic, antiallergic and cytostatic. This
colypeptide sequence is a single chain antibody that binds BLyS of the
invention. NOTE: The sequence data for this patent did not form part of
the printed specification, but was obtained in electronic format

The present invention describes a protein comprising an immunoglobulin (1g) heavy chain variable (VH) domain and an Ig light chain variable (VL) domain. The protein blinds a complex comprising a major histocompatibility complex (MHC) and a peptide, does not substantially bind the MHC in the absence of the bound peptide, and does not substantially bind the peptide in the absence of the MHC. The peptide is a peptide fragment of gp100, MUC1, TAX or hTERT. Also described: (1) a pharmaceutical composition comprising the novel protein and a carrier; (2) a cytotoxic T cell comprising one or more nucleic acids for expressing the Ig that binds a complex having an MHC and a peptide, does not substantially bind the comprising one or more nucleic acids for expressing the Ig that binds a comprising a first segment that encodes the Ig variable domain; (4) a comprising a first segment that encodes the Ig variable domain; (4) a comprising a first segment that encodes the competion of the MHC. Peptide complex, (7) expressing an antigen-binding protein; (8) ablating or killing a target cell that a comprise a sequence that encode the protein; (6) identifying the protein a subject, and (10) detecting an MHC-peptide complex in a sample. A protein of the invention has cytostatic activity, and can be used in gene therapy. The protein in a unstand or preventing a composition for treating or preventing a peptide complex where the peptide component in as peptide on an MHC. Peptide complex on an entrance of the protein in a subject, and the protein in a serior of an antiponent in a septide complex on an entrance of the protein of an antiponent in a septide complex of a peptide complex of a peptide on an entrance of the protein in a septide complex of a pep
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New protein comprising an immunoglobulin heavy chain variable (VH) domain and an immunoglobulin light chain variable (VL) domain, useful for preparing a composition for treating or preventing a cancerous disorder.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         24

transgenic Xenomice, created using the method of the invention. The specification describes a transgenic non-human mammal which has genome modifications that comprise an inactivated endogenous immunoglobulin (Ig) locus, so that the mammal does not display normal B-cell development. The modifications that comprise an inactivated human heavy chain Ig locus in germline configuration, the human heavy chain Ig locus in miner configuration, the human bay chain Ig locus comprising a human constant region and regulatory and switch sequences, human J-H genes, and human V-H genes and an inserted human kappa light chain Ig locus comprising a human kappa constant region, J-kappa genes, inserted are chain Ig locus comprising a human kappa constant region, J-kappa genes, and human B-cell development in the human kappa light chain Ig locus comprising a human kappa constant region, J-kappa genes, and human kappa constant region, J-kappa genes, and v-kappa genes inserted are cand v-kappa genes inserted are selected to restore normal B-cell development in the mammal. The cransgenic animals have a near complete human Ig locus, including both a human heavy chain locus and a human kappa light chain locus. They can be used for the production of human antibodies when exposed to particular antigens e-g. when exposed to human IL-8, EGFR or TNF- alpha respectively
                                                                                                                                                                                                                                                                                                               Human; immunoglobulin; Ig; transgenic; non-human mammal; inactivated endogenous Ig locus; B-cell development; Muman heavy Chain Ig locus; micro constant region; J-H; D-H; V-H gene; kappa light chain Ig locus; kappa constant region; J-kappa gene; V-kappa; production; antibody.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New transgenic non-human mammals - having an inactivated immunoglobulin locus and a near complete human immunoglobulin locus, used for production of human antibodies.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        엄
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ઠ
                                                                                                                                                                                                     The invention relates to a peptide or polypeptide comprising an FV molecule, a construct or fragments or a construct of a fragment with enhanced binding characteristics which selectively and/or specifically binds to a target cell in favour of other cells, where binding is primarily determined by a first hypervariable region and FV is a single chain FV (scFV) or a disulfide FV (dsFV). The peptide, optionally in association with or attached, compined, linked or fused to a pharmaceutical agent, is useful in the manufacture of a medicament, where the medicament has activity against a diseased cell, preferably a cancer cell (selected from carcinoma, sarcoma, leukaemia, adenoma, lymphoma, myeloma, blastoma, seminoma, and melanoma, where the leukaemia cell is an acute myeloid leukaemia cell). The peptide is also useful for preparing a composition for use in inhibiting the growth of a diseased or cancer composition for use in inhibiting the growth of a diseased or cancer cell. This sequence represents a human FV molecule hypervariable region
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          61
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 59
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Human; antibody; epitope; cancer; tumour; cell rolling; inflammation; metastasis; hypervariable region; autoimmune disease; thrombosis; restenosis; leukaemia; inflammatory disease; cardiovascular disease; myocardial infarction; retinopathic disease; abnormal platelet function; sulphated tyrosine-dependent protein-protein interaction.
                                                                                                                     Novel peptide/polypeptide for cancer therapy has Fv molecule, construct or fragment, or construct of fragment with enhanced binding characteristics so as to selectively bind target cell in favor of other

infortant in physiclogical phenomena such as cell rolling, metaetasis and inflammation, where the epitope is capable of being bound by an antibody, its antigen-binding fragment for its complex comprising at least one antibody or its binding fragment having a first hypervariable region. The epitopes are useful for inhibiting cell rolling, inflammation, autoimmune capacitopes are useful for inhibiting cell rolling, inflammation, autoimmune the chief are epitopes are useful for inhibiting cell rolling, inflammation, autoimmune capacitopes are useful for inhibiting cell rolling, inflammation, autoimmune complexed in a patient, cells, increase in number of tumour or leukaemia cells, increase in number of tumour or leukaemia cells, for increasing the susceptibility of diseased cells to damage by anti-disease, anti-cancer or anti-leukaemia agents, or for decreasing the number of tumour or leukaemia cells, in a patient, or in the manufacture of a medicament for the above mentioned purposes. The epitopes are useful for diagnosing and treating diseases such as cancer, leukaemia, autoimmune diseases, inflammatory diseases, cardiovascular diseases such as myocardial infarction, retinopathic diseases and other diseases mediated by abnormal platelet function and diseases caused by sulphated tyrosine-dependent protein-contein interactions. This sequence represents a human antibody fragment of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          59
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         invention relates to an isolated epitope present on cancer cells and
                                                                                                                                                                                                                                                                                                                                                                                    Novel isolated epitope present on cancer cells and important in physiological phenomena such as cell rolling, metastasis and inflammation, for treating autoimmune, inflammatory or cardiovascular diseases, and cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   42 GlyLys----GlyLeu----GluTrp11eGlyGlu11eAsnHisSerGlySerThrAsnT
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Mar-Haim
                                                                                                                                                                                                                                                                                 Levanon
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Human germline heavy chain variable region gene segment #40.

The inversion describes a meribod of mananistic antibody.

Comprising making chimmeric antibodies containing a complementarity determining region (CDR) from a non-human antibody and appropriate framework sequences (I) of human antibodies. (I) is selected by using canonical CDR structure types of non-human antibody in comparison to germline canonical CDR structure types of human antibody in comparison to germline canonical CDR structure types of human antibodies as the basis for selection, for humanisation. The method is useful for making a humanisation and converting a subject antibody sequence of any subject species to a less immunogenic form suitable for use in an object species. The method is reliable for identifying suitable human framework sequences to support on human CDR regions and to provide humanised antibodies that retain high antigen binding with low immunogenicity in humans, without the need for determining critically important amino acid residues in the framework, and without the need for multiple iteration and construction to obtain humanised antibodies with suitable therapeutic properties. The antibody has high affinity and low immunogenicity without need for comparison framework sequences between non-human and human antibodies. This sequence represents a human heady chain variable region gene segment used in the
                                                                                                                                                                                                                                                                                                                                                                                                  Making humanized antibody for converting antibody, by making chimeric antibodies containing complementarity determining region from non-human antibody and appropriate framework sequences of human antibodies.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention describes a method of making a humanised antibody

The invention relates to a novel artificial single-stranded antibody library with superior-repertory. The library is created by using a CDNA library as template for amplifying a fragment containing the CD1 and CD2 regions of immunosplobulin gene and a fragment containing the CD3 region by PCR, respectively, producing VH and VL libraries, transferring into a host, and displaying the single-stranded antibody on a phage surface. An antibody library of the invention is useful as a tool in proteomics and antibody chips and filters, for screening ligands for antigens, and for studying protein-DNA interaction, diagnosis and treating various diseases. The present sequence represents

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ઠ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ð
                                                                                                                                                                                                                                                                                                                                          The present invention describes a method for classifying a B-cell as malignant or normal comprising: (a) isolating a sequence representing an immunoglobulin (Ig) variable region from the B cell; (b) detecting the presence of a glycosylation site; and (c) classifying the cell as malignant or normal on the basis of the presence or absence of a glycosylation site. Also described: (l) treating a patient suffering from or at risk of having lymphoma; (2) screening for substances capable of inhibiting glycosylation of the Ig variable region of the B cell receptor inhibiting glycosylation of the type found in the germinal centre and N-glycans found on the surface of Ig of lymphoma cells. (s) has cycostation the surface of Ig of lymphoma cells. (s) has glycosylation inhibitor. The method is useful in classifying a B-cell as malignant or normal. The glycosylation inhibitor is useful in preparing a medicament for treating non-Hodgkin's lymphoma. The present sequence represents an Ig variable region sequence which is used in the cycosylation of the present invention.
                                                                                                                                                                                                                                                                                      ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Classifying a B-cell as malignant or normal by isolating a sequence representing an Ig variable region from the B cell, detecting the presence of a glycosylation site and classifying the cell as malignant
Ig variable region; glycosylation site; lymphoma; B cell receptor; cytostatic; gene therapy; glycosylation inhibitor; non-Hodgkin's lymphoma.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           0

The present invention relates to a method for optimizing at least one physico-chemical property of an antibody by a computational screening method. The method comprises: receiving a template antibody structure; selecting at least one variable position belonging to the antibody structure; selecting at least one amino acid to be considered at the variable position(s); analyzing the interaction of each selected amino acid at each variable position with at least part of the remainder of the antibody, including the selected amino acids at other variable positions; and identifying a set of at least one antibody sequence with at least optimized physico-chemical property. The method is useful for optimizing the physico-chemical properties of an antibody especially the stability, or antigen blinding affinity. The optimized antibody may be useful for treating a patient. The present sequence is an antibody may be variable region sequence used to illustrate the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  61

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    8
                                                                                                                                                                                                                                                                                                                                                                                                                                       physico-chemical property of an antibody by a computational screening method. The method comprises: receiving a template antibody structure; selecting at least one variable position belonging to the antibody structure; selecting at least one amino acid to be considered at the variable position (s); analyzing the interaction of each selected amino acid at each variable position with at least part of the remainder of the antibody, including the selected amino acids at other variable positions; and identifying a set of at least one antibody sequence with at least one optimized physico-chemical property. The method is useful for optimizing the physico-chemical properties of an antibody, especially the stability, solubility, or antigen binding affinity. The optimized antibody may be useful for treating a patient. The present sequence is an antibody wariable region sequence used to illustrate the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       61
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  present invention relates to a method for optimizing at least one
                                                                                                                                                                                                                                                                                                                      Computer optimization of physicochemical properties of antibodies comprises analyzing the interactions of amino acids at variable positions.
Antibody, stability, solubility, antigen binding affinity, variable region; human.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Antibody, stability, solubility, antigen binding affinity,

The present invention relates to a method for optimizing at least one physico-chemical property of an antibody by a computational screening method. The method comprises: receiving a template antibody structure; selecting at least one variable position belonging to the antibody structure; selecting at least one amino acid to be considered at the variable position(s); analyzing the interaction of each selected amino acid at each variable position with at least part of the remainder of the antibody, including the selected amino acids at other variable positions; and identifying a set of at least noe antibody sequence with at least optimized physico-chemical property. The method is useful for optimizing the physico-chemical property of an antibody, especially the stability, or antigen binding affinity. The optimized antibody may be useful for treating a patient. The present sequence is an antibody way be variable region sequence used to illustrate the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            hybrid antibody; antibody; framework region; homology; immunogenicity.

The invention relates to a method of producing a hybrid antibody or hybrid antibody fragment by: (i) providing an initial antibody having specificity for a target; (ii) determining the sequence of a variable cregion of the initial antibody; (iii) selecting a first component of the sequence of the first component to sequence contained in a reference database of antibody sequences or antibody fragment sequences from a target species; (v) selecting a sequence from an antibody in the database which demonstrates a high degree of homology to the first component, the second component selected from the group consisting of FR1, FR2, FR3 and FR4; (ii) comparing the sequence of the than the first component, the second component selected from the group consisting of FR1, FR2, FR3 and FR4; (iii) comparing the sequence of the second component to sequence contained in a reference database of antibody sequences or antibody fragment sequences from the target species; (viii) selecting a sequence from the database of antibody to the sequences from the database which demonstrates a high degree of homology to the second component and which is from a different antibody than the selected antibody; and (ix) operatively linking the component component complementarity determining regions (CDRs) of the initial antibody to produce a hybrid antibody or hybrid antibody the method is useful for producing a hybrid method of the method is useful for producing a manibody fragment.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     fragments are useful for therapeutic and diagnostic purposes. The method uses entire framework regions from a single antibody variable heavy or variable light chain to receive the CDRs. This produces antibodies that are highly homologous and exhibit reduced immunogenicity while
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Producing a hybrid antibody or hybrid antibody fragment by operatively linking the selected framework sequences to one or more complementarity determining regions of the initial antibody.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             maintaining an optimum binding profile. This sequence represents the amino acid sequence of an antibody from the VH gene locus.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Disclosure; SEQ ID NO 83; 77pp; English

Lymphoid cell line preparation useful for producing gene products having desired activity, involves screening and selecting cells having ongoing target sequence diversification and higher mutation rates.

Example 5; Page; 69pp; English.

The invention relates to a method of preparing a lymphoid cell line capable of directed constitutive hypermutation of a target capable of directed constitutive hypermutation of a target nucleic acid mutation exceeds that of other nucleic acid mutation for cate of target nucleic acid mutation exceeds that of other nucleic acid mutation exceeds that of other nucleic acid mutation exceeds that of other nucleic acid mutation exceeds that of other nucleic acid encoding the target gene operably linked to a sequence which directs hypermutation e.g., terminal deoxynucleotidyl transferase (TdT), in the lymphoid cell line, and identifying a cell or cells which express a mutated gene product with the desired activity. One or more clonal populations of the identified cells is established, and cells with an improved activity of interest are selected. These steps may be iteratively repeated until a gene product with a desired of the invention are used for directed constitutive hypermutation of a nucleic acid region in the preparation of a gene product, preferably an enzyme or an immunoglobulin (Ig) with a desired activity. In the exemplifications of the invention, IgM-secreting Ramos cells were selected for use as they undergo hypermutation of an acid region (WH). Sequences AAB01949-B01954 represent various mutant Ramos cell IgM WHS (AAB01949-B01954) which have lost the ability to bind anti-idlotype antibodies (anti-idl Ab) relative to the wild-type VH (AAB01949). Note: The present sequence is not shown in the specification, but is derived to the wild-type vH (AB01949).

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Sequence

Ig heavy chain V-IV region - human (fragment)

Ig heavy chain V-IV region - human (fragment)

C; Species: Homo eapleans (man)

C; Accession: B49028

R; Timmers: E.; Kenter, W. i. Thompson, A.; Kraakman, M.E.; Berman, J.E.; Alt, F.W.; Schuur. Bur. J. Immunod. 21, 2355-2363, 1991

A; Title: Diversity of immunoglobulin heavy chain gene segment rearrangement in B lymphob A; Reference number: A49028; MUID:92008140; PMID:1915549

A; Reference number: A49028

A; Residues preliminary

A; Molecule type: mRNA

A; Residues 1.143 orINA

A; Residues 1.143 orINA

A; Residues (B: S64473; NID:9236906; PIDN: AAB20012.1; PID:9236907

A; Experimental source: X-linked agammaglobulinemia patients, B lymphoblastoid cell lines

A; Note: sequence extracted from NCBI backbone (NCBIR:64473, NCBIP:64472)

C; Superfamily: immunoglobulin v region; immunoglobulin homology

C; Keywords: heterotetramer; immunoglobulin homology < IMM>

F; 15-97/ Domain: immunoglobulin homology < IMM>

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                   81
